

TA Meeting 10/28

- Discussed the tasks that we completed for the week:
 - Emma: Worked on the routing and has a temporary routing while currently waiting on the database.
 - Joel: Worked on figuring out the database and adding some test inputs for us to utilize them.
 - Karthik: Working on figuring out the AI API and how to implement it, including the docker compose file and adding documentation.
 - Josiah: Developed the game page, including the handlebars and JS to make the game usable. This includes adding the keyboard that can be utilized on screen, but also allowing the user to type on their own screen.
 - Reeves: Designed the login, registration, and home pages. Includes adding all the forms and the leaderboard and all the different icons to the home pages.

Team Meeting 10/29

- Figured out the issues with the git commits so far to ensure that everyone had their main's updated and we were able to add all changes that anyone has worked on during the week.
 - We had issues where some people were behind and could not commit because there were several merge conflicts
 - We also had issues with different branches and conflicts between the two branches because some people were messing with CSS.
- Tasks for next week:
 - Settings page HTML - **Reeves**
 - Figure out all the different buttons and formatting
 - Fix the leaderboard - **Reeves and Emma**
 - Fix the handlebars for Reeves and Emma will do the JS to get the information for the leaderboard
 - How to play paragraph - **Emma**
 - Routing for the pages and buttons - **Emma**
 - **Needs to be done: game page, logging out, routing once game is over**
 - Continuing to work on the game page and making it functional - **Josiah**
 - Possibly figure out the HTML for the end game page - ***in the ice box for right now**
 - Connecting the words to game - **Karthik and Joel**
 - Figuring out how to automatically take from the API to connect the database for the words
 - Utilize the AI API to figure out the point system and connect it to the database so we can track everyone's total points and points per game

- Tracking the user guesses throughout the game to ensure that we can keep track of all the points
