

TA Meeting 11/18

- Discussed with the TA about what we had done throughout the week and our gameplan for the rest of the week
- Discussed with Bhargav about getting the game functional for the score and fixing the styling a little bit to make it more interactable with the user (leaderboard and user profile page)

Team Meeting 11/19

- Figured out the merge conflict for the pop-up at the end of game due to issues with the [index.js](#) due to two different routes writing over one another
- Discussed how we want to change the home page
- Decided the length of the word limit to be 12 characters at most
- Decided that we need the characters to be responsive so that they'll shrink to prevent them from potentially covering the keyboard or the responses from the API

Tasks

Before Break:

- User profile styling - **Emma**
 - Added a user profile image
 - Need to figure out the styling of the forms to allow for users to change username, email, password, and profile picture
- Change username, email, password, and profile picture routing - **Emma**
 - Add the routes so that we can change all of these depending on what the user selects without sending them to a new page
- Connecting points to the game page and all the game routing - **Josiah**
- Fix max guesses - **Josiah+Karthik**
- Fix word cap - **Josiah**
- Change the API result from being a card to changing the background color - **Josiah**
- Results pop up styling - **Reeves**
- Fix the word bank - **Karthik**
 - The issue is currently that the words being provided are consistently the same. We will solve this by getting a larger word bank and using the API to make sure the word wasn't recently used.

During Break:

- Documentation (ReadMe, etc.) - **Emma, Joel**
- Make the golfball move based on the API - **Karthik+Josiah**
- Fix home page styling - **Reeves**

- Move the leaderboard and make it larger and include the user profile picture
- Move the “how to play” information onto the right side and remove it from being a pop-up to make it more user friendly
